

DISCOVERY PHASE: STUDYFLOW

1. Problem Statement

Students often struggle to manage multiple academic responsibilities such as assignments, tasks, deadlines, and study schedules. Existing tools are either too complex or lack a simple, unified view of productivity. This results in missed deadlines, poor time management, and increased academic stress.

2. How Might We (HMW)

How might we design a simple and responsive dashboard that helps students efficiently manage tasks, track study progress, and stay organized across their academic workload? **3.**

3. Target Users

- University students
- Beginners who need simple task tracking
- Students managing multiple courses and deadlines

4. User Pain Points

- Forgetting deadlines and tasks
- No centralized productivity system
- Difficulty tracking study hours
- Overly complex productivity apps

5. User Goals

- Stay organized with tasks and assignments
- Track daily and weekly study progress
- Improve productivity with minimal effort
- Access system easily on mobile and desktop

6. Solution Overview

StudyFlow is a responsive student productivity dashboard that allows users to manage tasks, track study progress, and monitor academic performance through a clean and minimal interface. It follows a mobile-first design approach and adapts across all devices.
